

ENVIRONMENTAL POLICY

We recognise that good management includes environmental matters and we will ensure environmental criteria are part of our business decisions.

- i) We will maintain an understanding of environmental impacts throughout the life cycle of our products including the raw materials we use, our own manufacturing operations and the use and disposal of our products, so we can make informed decisions about the environment.
- ii) We will systematically examine our own activities and take steps to minimise the environmental impact of our operations in the most cost effective way.
- iii) Our environmental concern extends beyond our operations. We require our suppliers to conduct their business with due regard for environmental considerations and we will include environmental standards in our supplier process.
- iv) We will ensure that our employees understand the high level of corporate commitment to environment protection plans and ensure full training in good operating practice is carried out.
- v) We can call upon extensive technical expertise from professionals outside the company such as consultants, suppliers and industry colleagues who can help us learn and build on our base of knowledge.
- vi) Our approach means the environment is always a critical consideration.
